

## Vision

---

The program should keep pace with scientific and research development to achieve comprehensive quality standards. And to meet the local and regional needs of scientific research and various applied studies related to mathematics.

## Mission

---

The program seeks to graduate a generation of qualified cadres with scientific knowledge to meet the diverse needs of the labor market in the various fields of mathematical sciences. Enabling distinguished graduates to complete their postgraduate studies in various fields of mathematical sciences in order to raise the level of higher education.

## Goals

---

- Contribute to meet the local and regional needs of scholars in mathematics for secondary education, general education and other scientific and applied fields.
- Expanding students' knowledge of the methods of scientific research.
- Enabling academically distinguished students to complete their studies for higher degrees.
- Encouraging scientific research and publishing in prestigious scientific journals.
- Interacting with the local society by providing scientific and applied services and consultations to different sectors of society.
